

COURSE REFLECTION:

The material contained in this course was interactive and engaging. I was a little hesitant about taking the course because most science classes I've taken were in the classroom. Due to the pandemic and demands of the course, I sensed SLCC students and teachers adapted quite well to the situation and made the best out of it. It then dawned on me that the topic of climate change must be considered in the same manner. As USA politics shifts its focus on being pro-science, I am hoping to see serious efforts from lawmakers and organizations to make the appropriate changes so climate change can once again be front and center and in everyone's minds. I feel the sense of camaraderie among people as we move toward a shared goal that will lead the world to achieve great things. It's evident adaptability is a key factor in evolution and science. Climate change is no exception.
